

# Features

Writing and reading of messages, uploading and downloading of attachments

Viewing messages as PDF for nice printing

Managing messages (flag settings, moving between folders)

Address management (storing of e-mail contacts)

Multiple language support (currently: english / german / french / swiss-german), automatically set via browser language preference

Folder management (addition and removal of mail folders), with hierarchies

User configuration (personalization)

Demo user (reading stuff, sending mails to herself, etc.)

Virtual hosting support (e-mail addresses automatically created according to context)

Support for server-only environments (i.e., IronMailer can run in a server-only environment, without a windowing system installed)

Easier debugging: when an error occurs, the error content and stack trace is in the page source, as a comment. Further, all errors are logged on the system (log-files and levels are configurable).
